

Art Unit: 1772

PROPOSED EXAMINER'S AMENDMENT TO ABSTRACT

Cancel the abstract.

Replace with: --A concrete formwork panel bent into a hollow cylindrical form comprising a high-density polyethylene plastic core, a steel facing layer attached to the plastic core and a metal backing layer attached to the plastic core. The panel thickness ranges from 7 millimeters to 15 millimeters. The panel has a density such that the panel in flat form prior to bending into a hollow cylindrical form that is 8 feet (2.43 meters) by 2 feet (0.6 meters) weighs 77 pounds or less.--

Figure 14 would be the figure published on the front page of the patent.
